Professional Summary

Fullstack Software Engineer with solid experience in building end-to-end applications, combining **Golang's** high performance on the backend with **React.js** interactivity on the frontend. Specialist in modernizing complex e-commerce systems, with a strong focus on **Ownership** and **Monitoring** of critical environments. Experienced in leading the full delivery lifecycle: from business requirement refinement and technical planning to task estimation and microservices architecture. Focused on scalability (AWS), resilience, and proactive business problem-solving through technology and AI automation.

Technical Skills

- **Backend:** Golang, Node.js, Python, RESTful APIs, gRPC, Microservices.
 - **Frontend:** React.js, TypeScript, JavaScript, Redux/Context API, Tailwind CSS, Styled Components.
 - **Architecture & Quality:** SOLID, Clean Architecture, DDD, TDD (Jest, Go Test).
 - **Databases & Messaging:** PostgreSQL, MySQL, Redis, MongoDB, Kafka, AWS SQS.
 - **Infrastructure:** Docker, Kubernetes, AWS, CI/CD, Terraform.
-

Professional Experience

Dafiti Group

Software Engineer II (Fullstack) | 06/2025 - Present

- **Modernization & Architecture:** Leading the technical migration of PHP legacy systems to **Golang** microservices, integrating modern **React** interfaces and optimizing communication via RESTful/gRPC APIs.
- **Planning & Refinement:** Acting strategically in business demand refinement, transforming complex requirements into actionable technical tasks, providing accurate estimates, and ensuring project technical viability.
- **Ownership & Monitoring:** Responsible for the End-to-End application lifecycle, implementing observability and monitoring strategies to ensure system health in production and rapid incident resolution.
- **Business Problem-Solving:** Focused on high-complexity business solutions, collaborating with cross-functional teams to deliver features that directly impact conversion and operational efficiency.
- **Technical Excellence:** Mentoring developers and promoting **Clean Architecture** and **DDD** patterns, improving code quality and maintainability across the Fullstack ecosystem.

Software Engineer I | 01/2023 - 05/2025

- **Internal Tools Development:** Created automation tools and comprehensive dashboards using **Node.js, React, and MySQL**, streamlining real-time operational data visualization.
- **CLI & Automation:** Developed command-line tools in **Golang (Cobra)** using goroutines to optimize deployment and infrastructure processes.
- **Testing & Quality:** Implemented automated testing suites (unit and integration) with **Jest** for frontend and **Go Test** for backend, increasing delivery reliability.

Supply Chain Analyst / Assistant | 07/2021 - 01/2023

- **Custom Web Solutions:** Developed a full-stack web application in **Django (Python)** for quality control and returns management, integrating physical operations with the company's digital ecosystem.
 - **Process Automation:** Automated logistics processes using Python, creating indicators and dashboards for daily monitoring of returns and SLAs.
-

Key Projects

Floov (Events App) | Fullstack Developer

- Scalable event management platform.
 - **Tech Stack:** React frontend with mobile-first UX focus and a robust backend designed to handle high-traffic spikes.
